Data & AI Engineer working with data platforms, machine learning and analytics solutions

I design and build data platforms, BI solutions, and AI systems that turn raw data into reliable, actionable insights.

My work focuses on end-to-end solutions – from data ingestion and modeling to dashboards, machine learning models, and AI-driven workflows.

I specialize in:

- Data pipelines and data modeling (SQL, Databricks, Azure)
- Business intelligence and reporting (Power BI)
- Machine learning and NLP solutions
- Agentic workflows and AI systems built for real-world use

I prioritize simplicity, scalability, and strong data validation to ensure solutions are robust, maintainable, and ready for production.

Technical Skills

Machine Learning & AI

- Machine learning model development
- NLP and sentiment analysis
- Feature engineering and model evaluation
- Time-series forecasting models
- Data preparation for ML workflows
- Familiar with LLM workflows and AI model integration

Programming

- Python (Pandas, NumPy, ML workflows)
- SQL (PostgreSQL, Azure SQL)

Business Intelligence & Analytics

- Power BI (data modelling, dashboards, reporting)
- KPI tracking and data visualisation
- Translating business requirements into analytical solutions

Education

- MSc Business Intelligence, Aarhus University 2023–2025
- BSc Economics and Business Administration, Aarhus University 2020–2023

WORK EXPERIENCE

Data Engineer & AI Consultant, Benjamin Nouri Consulting

Oct 2025 – Present · Aarhus

- Working with classical BI and data engineering challenges
- Designing and developing data pipelines and data models across multiple data sources
- Developing dashboards and analytics tools for data-driven decision-making
- Designing and implementing agentic workflows and AI agents
- Building production-ready solutions with a focus on structure, validation, and scalability

BI Associate Consultant, Otari

Apr 2024 – Jun 2025, Galten

- Built and maintained data pipelines and reporting layers using PostgreSQL and Databricks.
- Worked with structured data models and transformations to support KPI and management reporting.
- Collaborated with stakeholders to improve data quality, relevance and usability.

Data Analyst, Lingren Larsen Kapital ApS

Jun 2022 – Apr 2024, Aarhus

- Developed forecasting and analytical models in Python using historical datasets.
- Worked with data ingestion, preprocessing and validation to support analytical use cases.
- Automated data preparation and reconciliation workflows, reducing manual effort.

Mentor, MentorDanmark

Jul 2021 – Mar 2023, Aarhus

- Tutored students in mathematics and helped strengthen analytical thinking.
- Developed communication skills and the ability to explain complex concepts clearly.

Projects

AI Market Sentiment Platform (Master’s Thesis)

- Developed an NLP pipeline for financial news analysis
- Implemented LLM-based sentiment classification using FinBERT
- Built data ingestion pipelines for financial news and market data
- Designed feature engineering workflows for time-series prediction
- Integrated AI insights into dashboards and decision-support tools

Danish Energy Analytics Platform

- Built a data platform using Python and PostgreSQL to analyse and predict energy prices.
- Worked with API data ingestion, time-series analysis and forecasting models.

Data & AI Project Portfolio:

EDUCATION

2023 – 2025, MSc Business

Intelligence – Aarhus University

- Thesis: A Lightweight AI System for Real-Time Market Sentiment Analysis

2020 – 2023, BSc Economics and Business Administration – Aarhus University

- Bachelor Thesis: Strategic Analysis and Valuation of Novo Nordisk A/S

VOLUNTEER WORK

Coding Pirates

Nov. 2025 – Feb. 2026

- Volunteer teaching Python, problem solving and creativity to children.

From Street to School,

Marts. 2019 – Aug 2020.

- Mentored youth, helping them build routines, confidence and better learning skills.

STRENGTHS

- Fast learner in new data tools, systems and workflows
- Strong analytical and problem-solving mindset
- Comfortable working with both technical teams and business stakeholders
- Structured and reliable when building data and reporting solutions

INTERESTS

- Strength training and running
- Data engineering, AI tools and new technologies
- Continuous learning through courses and certifications

LANGUAGES

- Danish (native)
- English (fluent)
- Farsi (intermediate)
- German (basic)
